

I claim:

1. A moisture-reactive hot-melt composition formed by admixing components comprising at least one polyol, at least one polyisocyanate,
5 and at least one silane-functional polyolefin.
2. The composition of claim 1, wherein said silane-functional polyolefin has 20% crystallinity or less.
- 10 3. The composition of claim 1, wherein said silane-functional polyolefin comprises at least one silane-functional poly- α -olefin.
4. The composition of claim 1, wherein said composition further comprises at least one silane adhesion promoter.
- 15 5. The composition of claim 1, wherein said silane-functional polyolefin comprises at least one silane-functional poly- α -olefin, wherein said silane-functional polyolefin has 20% or less crystallinity, and wherein said composition further comprises at least one silane adhesion
20 promoter.
6. A method of making a moisture-reactive hot-melt composition comprising admixing components comprising at least one polyol, at least one polyisocyanate, and at least one silane-functional polyolefin.
- 25

7. The method of claim 6, wherein said silane-functional polyolefin comprises at least one silane-functional poly- α -olefin, wherein said silane-functional polyolefin has 20% or less crystallinity, and wherein said hot-melt composition further comprises at least one silane adhesion promoter.
8. A method for bonding substrates comprising
- (a) making a moisture-reactive hot-melt composition comprising admixing components comprising at least one polyol, at least one polyisocyanate, and at least one silane-functional polyolefin;
 - (b) heating said hot-melt composition;
 - (c) applying said heated hot-melt composition to a first substrate;
 - (d) contacting said applied heated hot-melt composition with a second substrate; and
 - (e) cooling, or allowing to cool, said hot-melt composition.
9. The method of claim 8, wherein said silane-functional polyolefin comprises at least one silane-functional poly- α -olefin, wherein said silane-functional polyolefin has 20% or less crystallinity, and wherein said hot-melt composition further comprises at least one silane adhesion promoter.
10. A bonded composite article comprising at least two substrates bonded by a moisture-reactive hot-melt composition formed by admixing components comprising at least one polyol, at least one polyisocyanate, and at least one silane-functional polyolefin; wherein said silane-functional polyolefin comprises at least one silane-functional

poly- α -olefin; wherein said silane-functional polyolefin has 20% or less crystallinity; and wherein said hot-melt composition further comprises at least one silane adhesion promoter.
